

2. Read and write operation

The screenshot shows an IDE with a project named 'Java' and a package 'com'. The 'src' folder contains several files, including 'ReadFile.java'. The 'ReadFile.java' file is open, showing the following code:

```
1 import java.io.BufferedReader;
2 import java.io.IOException;
3
4 class ReadFile {
5     public static void main(String[] args) {
6         try {
7             BufferedReader br = new BufferedReader(new FileReader("data.txt"));
8
9             int ch;
10            while ((ch = br.read()) != -1) {
11                System.out.print((char) ch);
12            }
13
14            br.close();
15        } catch (IOException e) {
16            System.out.println("Error occurred.");
17        }
18    }
19 }
```

The 'Run' button is highlighted, and the output console shows the following text:

```
"C:\Program Files\Java\jdk-20.0.1\bin\java.exe" "-javaagent:C:\Program Files\Java\jdk-20.0.1\lib\jrt-fs.jar" -Dfile.encoding=UTF-8 -Duser.country=US -Duser.language=en -Duser.variant -cp . -Djava.class.path=. ReadFile.java
Welcome to Java File Reading.
Process finished with exit code 0
